## 3 Functionality and Application Purposes

The DR. KAISER dressing app enables all relevant parameters in connection with dressing to be calculated easily and precisely.

Depending on the application, a distinction is made between standing and rotating dressers and their geometry, straight (1A1) or radius, is included in the calculation. On the basis of the tool dimensions, the degree of contact and, where applicable, the dress delivery, dresser feed speeds are calculated. In parallel, by determining the speed ratios, the number of revolutions to be set for the dressing spindle can be calculated.

Moreover, a simple tool for conversion of the grinding-wheel peripheral speed to the related number of revolutions, and vice versa, is integrated.

The results obtained from the app must be critically checked by the user, since no plausibility check can be made for the input values, i.e. the results are only recommendations and make no claim to correctness, faultlessness, freedom from intellectual property rights and copyright of third parties, completeness and/or applicability.
